

Global Tropics Hazards Outlook

Climate Prediction Center

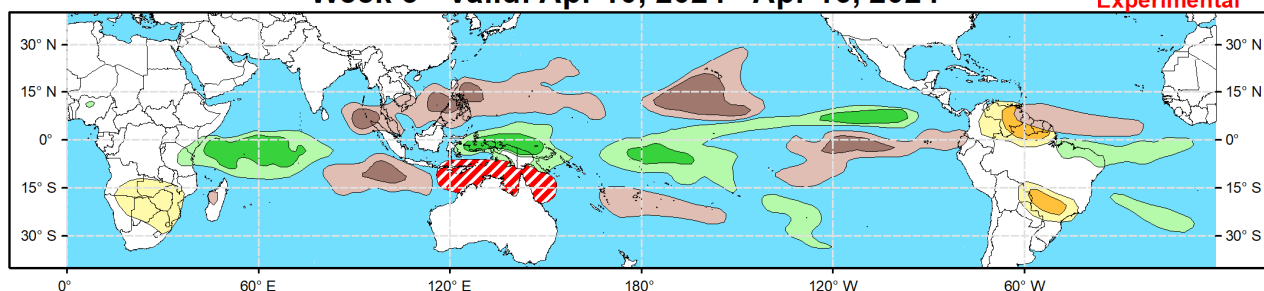

Week 2 - Valid: Apr 03, 2024 - Apr 09, 2024

Week 3 - Valid: Apr 10, 2024 - Apr 16, 2024

**** Experimental ****

**Tropical Cyclone (TC)
Formation Probability**

Tropical Depression (TD)
or greater strength

**Above-Average
Rainfall Probability**

Weekly total rainfall in the
Upper third of the historical range

**Below-Average
Rainfall Probability**

Weekly total rainfall in the
Lower third of the historical range

**Above-Average
Temperatures Probability**

7-day max temperatures in the
Upper third of the historical range

**Below-Average
Temperatures Probability**

7-day min temperatures in the
Lower third of the historical range

Issued: 03/26/2024

During the past week only Tropical Cyclone Gamane formed northeast of Madagascar.

During the outlook period there will be increased likelihood of Tropical Cyclone development over the eastern Indian Ocean and to the north of Australia during Week-2. The area at risk is expected to diminish in Week-3 and become confined to waters north of Australia. There are currently no signals for Tropical Cyclone development north of the Equator.

Latest atmospheric configurations support enhanced risk of above average rainfall near and just south of the Equator across the Pacific and Indian Oceans, and also over parts of East Africa. Significantly drier than normal conditions north of the Equator especially around the Philippines and westwards to Sumatra are expected in both Week-2 and Week-3.
